# Supplementary Material Stereoselective synthesis and structure determination of a bicyclo[3.3.2]decapeptide 

Marco Bartoloni, ${ }^{\text {a }}$ Sandro Waltersperger, ${ }^{\mathrm{b}}$ Mario Bumann, ${ }^{\text {a }}$ Achim Stocker, ${ }^{\text {a }}$ Tamis<br>Darbre, ${ }^{\mathrm{a}}$ and Jean-Louis Reymond ${ }^{\mathrm{a} *}$<br>${ }^{\text {a }}$ Department of Chemistry and Biochemistry, University of Bern, Freiestrasse 3, 3012 Bern, Switzerland<br>${ }^{\mathrm{b}}$ Paul Scherrer Institut, 5232 Villigen PSI, Switzerland<br>E-mail: jean-louis.reymond@ioc.unibe.ch

This paper is dedicated to Prof. Pierre Vogel, a master of bicyclic molecules, on the occasion of his $70^{\text {th }}$ Birthday

## Contents

Fig S1 ..... 2
HPLC and MS characterization of $\mathbf{1 b}$ ..... 3
NMR exp. details and ${ }^{1} \mathrm{H}-\mathrm{NMR}$ characterization of $\mathbf{1 b}$. ..... 4
X-ray crystallography data ..... 5

Figure S1. Comparison between 1b and 1b'. (a) Superimposition of RP-HPLC chromatogram of the second cyclization reactions, 2 h after start. The peak marked by a triangle corresponds to the phosphinoxide byproduct of PyBOP. (b) Amide proton regions of ${ }^{1} \mathrm{H}-\mathrm{NMR}$ spectra of $\mathbf{1 b}$ and $\mathbf{1 b}{ }^{\prime}$ $\left(\mathrm{CD}_{3} \mathrm{OD}\right) .1 \mathbf{b}$ displays a single set of amide protons, assigned according to labels (missing amide protons are concealed by the signals of the aromatic side chains, between 7.0 and 7.5 ppm , as revealed by COSY spectra), whereas 1b' exhibits a complex spectrum, probably derived from a conformational mixture.

NMR (experimental details) - NMR data were acquired in DMSO- $d_{6}$ at 298 K using a Bruker AvanceII 400 MHz NMR spectrometer. 1D ${ }^{1} \mathrm{H}-\mathrm{NMR}$ data were acquired with 64 transients into 32 K data points over a ppm width of 12 ppm . A relaxation delay of 6 s was applied between transients. $2 \mathrm{D}{ }^{1} \mathrm{H}$-TOCSY NMR data were acquired over a frequency width of 12 ppm in both $\mathrm{F}_{2}$ and $F_{1}$ into 2 K complex data points in $F_{2}$ using $256 \mathrm{t}_{1}$ increments. A relaxation delay of 2 s between transients was used for all experiments. ${ }^{1} \mathrm{H}$-TOCSY data were recorded using 32 transients. The 2D TOCSY NMR data were acquired with a spin-lock time of 70 ms . Data were processed using standard apodizing functions prior to Fourier transformation.
$2 \mathrm{D}{ }^{1} \mathrm{H}^{-13} \mathrm{C}$ HSQC NMR data were acquired, with ${ }^{13} \mathrm{C}$ decoupling during the acquisition period, over an F 2 frequency width of 12 ppm into 2 K complex data points. 32 transients were accumulated for each of $128 t 1$ increments over an F1 frequency width of 180 ppm centered at 90 ppm . Phase-sensitive data were acquired in a sensitivity-improved manner using an echoantiecho acquisition mode.

## ${ }^{1} \mathrm{H}$-NMR characterization of 1 b (DMSO- $\boldsymbol{d}_{6}$ )
