Abstract
1,3-Dithiinium salts have been synthesized by the reactions of 1-bromo-2-acylacetylenes with dithiomalonamide or dithiomalonic acid dianilide in acetone or acetic acid or in acetic acid and an equimolar amount of perchloric acid.

Keywords: 1-Bromo-2-benzoylacetylene, 1-bromo-2-(2-thenoyl)acetylene, dithiomalonamide, dithiomalonic acid dianilide, 1,3-dithiins

Introduction
Generally, the reactions of N,S-containing polyfunctional nucleophiles involve sulfur and nitrogen atoms to give 1,3-thiazines\(^1\)\(^2\) and 1,3-thiazolines.\(^3\)\(^4\) The interaction of 1,3,5-trisubstituted-2,4-dithiobiurets and isocyanodichloride afforded an unstable 1,3,5-dithiazines which on treatment with ethanol changed into 1,3,5-triazines.\(^5\)\(^6\) The data on 1,3-dithiin synthesis are meagre.\(^7\)\(^8\) It has been shown that the reaction of aromatic aldehydes with hydrogen sulfide and dimethyl acetylenedicarboxylate or methyl propiolate led to 1,3-dithiins.\(^10\)

Results and Discussion
Recently we have studied the interaction of polyfunctional nucleophilic compounds with 1-bromo-2-acylacetylenes.\(^11\)\(^12\) The present work deals with the reactions of dithiomalonamide or dithiomalonic acid dianilide, \(2\) with 1-bromo-2-benzoyl- and 1-bromo-2-(2-thenoyl)acetylenes, \(1.\)
It was found that the reaction in acetone or acetic acid resulted in 6-amino(anilino)-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-iminium(phenyliminium) bromides $4a,b$ instead of the expected 1,3-thiazoles.

The perchlorates of the corresponding 1,3-dithiins ($4c-f$) were isolated from the reaction mixture in acetic acid containing equimolar amounts of perchloric acid. The reaction probably took place by a cyclization involving the sulfur atom of the thiocarbonyl group followed by intermediate formation of the acyl ethynyl sulfides $3$.

The treatment of 6-anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium bromide $4b$ with 20% aqueous ammonia solution for 7 h gave rise to the free base, 6-anilino-2-(2-oxo-2-phenylethylidene)-4-phenylimino-1,3-dithiin, $5$.

Heating of 6-anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium bromide $4b$ in acetic acid in the presence of hydrochloric acid led to substitution of a bromide anion for the perchlorate anion.

It was impossible to obtain the free base from 6-amino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-iminium bromide, or to substitute a bromide ion for ClO$_4^-$ because of decomposition of the initial compound under these conditions. In addition, we failed to identify the decomposition products.

Apparently such behavior was caused by the presence of phenyl substituents on the nitrogen atom in compound $4b$, which stabilized the molecule and allowed the obtention of the stable 6-anilino-2-(2-oxo-2-phenylethylidene)-4-phenylimino-1,3-dithiin, $5$ or the 6-anilino-2-(2-oxo-2-phenyl-ethylidene)-1,3-dithiin-4-phenyliminium perchlorate, $4d$.

Experimental Section

General Procedures. IR spectra were measured on a Specord 75 IR instrument (KBr disks). $^1$H- and $^{13}$C NMR spectra were recorded on a Bruker DPX 400 spectrometer (400.13 and 100.61 MHz, respectively) in DMSO-$d_6$ with HMDS as internal standard.

6-Amino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-iminium bromide (4a). 1-Bromo-2-benzoylacetylene (0.52 g, 2.5 mmol) was slowly added to a solution of dithiomalonamide (0.34 g, 2.5 mmol) in glacial acetic acid (20 ml) under vigorous stirring at 20° for 7 h. The precipitate was filtered off, washed with ether, and dried in vacuum to give the product (0.32 g, 35%), m.p. 193–195 °C. IR data, ν/ cm$^{-1}$: 624 (C=S), 1551–1595 (C=C, C=N), 1640 (C=O), 3059–3306 (NH$_2$). $^1$H- NMR, δ/ ppm: 6.19 (1H, s, =CH), 9.58, 9.78 (4H, s, s, 2NH$_2$), 7.55–8.08 (5H, m, Ph), 8.01 (1H, s, =CHCO). $^{13}$C- NMR, δ/ ppm: 87.3 (CH−), 121.1 (=CHCO), 128.5, 129.8, 133.8, 136.3 (Ph), 140.2 (S=C=S), 164.6 (C=NH$_2$), 166.4 (C=N=N), 186.5 (C=O). Found: C 42.27; H 3.20; Br 23.35; N 8.19; S 18.70. C$_{12}$H$_{11}$BrN$_2$O$_2$S requires C 41.99; H 3.23; Br 23.28; N 8.16; S 18.68%.

6-Anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium bromide (4b). Prepared analogously from dithiomalonamide (0.34 g, 2.5 mmol) and 1-bromo-2-benzoylacetylene (0.2 g, 10 mmol) and 50% aqueous HClO$_4$ (0.29 ml, 2.5 mmol) in glacial acetic acid (210 ml) was slowly added to a solution of dithiomalonamide (0.34 g, 2.5 mmol) in glacial acetic acid (20 ml) under vigorous stirring at 20° during 4 h. The precipitate was filtered, washed with ether and dried in vacuum to give the product (0.32 g, 35%), m.p. 193–195°C. IR data, ν/ cm$^{-1}$: 624 (C=S), 1122 (ClO$_4^-$), 1543–1596 (C=C, C=N), 1624 (C=O), 3215–3305 (NH$_2$). $^1$H- NMR, δ/ ppm: 6.10 (1H, s, =CH), 7.55–8.08 (5H, m, Ph), 8.01 (1H, s, =CHCO), 9.30, 9.35 (4H, s, s, 2NH$_2$). $^{13}$C- NMR, δ/ ppm: 88.3 (CH−), 121.9 (=CHCO), 129.3–137.0 (Ph), 140.9 (S=C=S), 165.5 (C=N), 167.4 (C=N=N), 200.8 (C=O). Found: C 40.09; H 2.92; Cl 9.28; N 7.30; S 17.92. C$_{12}$H$_{11}$ClN$_2$O$_5$S$_2$ requires C 39.73; H 3.06; Cl 9.77; N 7.72; S 17.68%.

6-Anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium perchlorate (4c). A solution of 1-bromo-2-benzoylacetylene (0.52 g, 2.5 mmol) and 50% aqueous HClO$_4$ (0.29 ml, 2.5 mmol) in glacial acetic acid (210 ml) was slowly added to a solution of dithiomalonamide (0.34 g, 2.5 mmol) in glacial acetic acid (20 ml) under vigorous stirring at 20° during 4 h. The precipitate was filtered, washed with ether and dried in vacuum to give the product (0.32 g, 35%), m.p. 193–195°C. IR data, ν/ cm$^{-1}$: 624 (C=S), 1122 (ClO$_4^-$), 1543–1596 (C=C, C=N), 1624 (C=O), 3215–3305 (NH$_2$). $^1$H- NMR, δ/ ppm: 6.10 (1H, s, =CH), 7.55–8.08 (5H, m, Ph), 8.01 (1H, s, =CHCO), 9.30, 9.35 (4H, s, s, 2NH$_2$). $^{13}$C- NMR, δ/ ppm: 88.3 (CH−), 121.9 (=CHCO), 129.3–137.0 (Ph), 140.9 (S=C=S), 165.5 (C=N), 167.4 (C=N=N), 200.8 (C=O). Found: C 40.09; H 2.92; Cl 9.28; N 7.30; S 17.92. C$_{12}$H$_{11}$ClN$_2$O$_5$S$_2$ requires C 39.73; H 3.06; Cl 9.77; N 7.72; S 17.68%.

6-Anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium perchlorate (4d). Prepared analogously from dithiomalonamide (0.2 g, 10 mmol) and 50% aqueous HClO$_4$ (0.12 ml, 1.0 mmol). Yield 0.26 g (35%), m.p. 223–224°C. IR data, ν/ cm$^{-1}$: 628 (C=S), 1110 (ClO$_4^-$), 1480-1600 (C=C, C=N), 1620 (C=O), 3200 (NH). $^1$H- NMR, δ/ ppm: 6.32 (1H, s, =CH), 7.38–8.07 (15H, m, Ph), 7.53 (1H, s,
Substitution of Br⁻ for ClO₄⁻

50% aqueous HClO₄ (0.2 g, 2 mmol) in glacial acetic acid (10 ml) was added dropwise to a solution of 6-anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium bromide (IVb) (0.08 g, 2.0 mmol) in glacial acetic acid (10 ml), then stirred at 20°C for 4 h. The precipitate, 0.03 g (38%) was 6-anilino-2-(2-oxo-2-phenylethylidene)-1,3-dithiin-4-phenyliminium perchlorate.

6-Amino-2-[2-oxo-2-(2-thienyl)ethylidene]-1,3-dithiin-4-iminium perchlorate (4e). Prepared in the same way as (IVc) from dithiomalonic acid dianilide (0.34 g, 2.5 mmol), 1-bromo-2-(2-thienoyl)-acetylene (0.52 g, 2.5 mmol) and 50% aqueous HClO₄ (0.29 ml, 2.5 mmol); yield 0.51 g (55%); m.p. 258–260°C. IR data, ν/cm⁻¹: 628 (C-S), 1120 (ClO₄⁻), 1550–1594 (C=C, C=N), 1637 (C=O), 3159–3314 (NH₂). ¹H-NMR, δ/ ppm: 6.12 (1H, s, =CH), 7.28–8.21 (3H, m, C₄H₃S), 7.89 (1H, s, =CHCO), 9.49, 9.60 (4H, s, s, 2NH₂). ¹³C-NMR, δ/ ppm: 87.9 (C=), 123.1 (=CHCO), 129.04-142.54 (C₄H₃S), 141.0 (S-C-S), 166.1 (C=NH), 200.0 (C=O). Found: C 32.12; H 2.88; Cl 9.26; N 7.88; S 26.46. C₁₀H₉ClN₂O₅S₃ requires C 32.56; H 2.46; Cl 9.61; N 7.59; S 26.08%.

6-Anilino-2-[2-oxo-2-(2-thienyl)ethylidene]-1,3-dithiin-4-phenyliminium perchlorate (4f). Prepared analogously from dithiomalonic acid dianilide (0.22 g, 1.0 mmol), 1-bromo-2-(2-thienoyl)-acetylene (0.22 g, 1.0 mmol) and 50% aqueous HClO₄ (0.12 ml, 1.0 mmol). The yield was 0.3 g (43%); m.p. 221–223°C. IR data, ν/cm⁻¹: 628 (C-S), 1110 (ClO₄⁻), 1500–1580 (C=C, C=N), 1620 (C=O). ¹H-NMR, δ/ ppm: 6.20 (1H, s, =CH), 7.21–8.25 (3H, m, C₄H₃S), 7.92 (1H, s, =CHCO), 9.58 (1H, s, NH). ¹³C-NMR, δ/ ppm: 88.1 (C=), 122.8 (=CHCO), 129.1-142.58 (C₄H₃S), 141.25 (S-C-S), 166.3 (C=NH), 200.0 (C=O). Found: C 50.62; H 3.29; Cl 6.91; N 7.59; S 26.08%.
