Abstract
2-Methyl[1]benzofuro[3,2-c]pyridin-1-one 2 was obtained by reaction of the pyridone 1 with NaH followed by methylation with methyl iodide. The reaction of 1 with excess of P₄S₁₀ rendered the corresponding thione 3, which was methylated in PTC conditions giving 1-methylsulfanyl[1]benzofuro[3,2-c]pyridine 4. The reactions of 1-chloro[1]benzofuro[3,2-c]pyridine 5 with excess of heterocyclic secondary amines (piperidine, morpholine and pyrrolidine) gave 1-substituted [1]benzofuro[3,2-c]pyridines 6-8. Suzuki coupling reactions were realized with chloro-derivative 5 and phenylboronic or pyridine-3-boronic acids when 1-phenyl[1]benzofuro[3,2-c]pyridine 9 or 1-(pyridin-3-yl)[1]benzofuro[3,2-c]pyridine 10 were obtained. 2-Amino[1]benzofuro[3,2-c]pyridin-2-ium 4-methylbenzene sulfonate 12 was prepared by N-amination of [1]benzofuro[3,2-c]pyridine 11 with 1-[(aminoxy)sulfonyl]-4-methylbenzene. Then 12 was transformed into an unisolated zwitterionic N-imide 13, which afforded by 1,3-dipolar cycloaddition reactions with dimethyl but-2-yne-dioate (DMBD) or ethyl propiolate the corresponding 1-benzofuro[3,2-c]pyrazolo[1,5-a]pyridine carboxylic acid-esters 14, 15. The reaction of 11 with benzoylnitromethane and DMBD gave benzoyl dimethyl ester 16. The structures of all new compounds were proved by IR and ¹H and ¹³C NMR spectra and the structure of 1-phenyl[1]benzofuro[3,2-c]pyridine was proved by X-ray analysis.

Keywords: Fused [1]benzofurans, pyridines, pyrazoles, pyrroles; nucleophilic substitution, coupling reactions, N-imines, 1,3-dipolar cycloaddition
Introduction

A variety of fused pyridines have been studied for a long time in the field of the chemistry of heterocyclic compounds.\textsuperscript{1,2} Furopyridines are very similar to such skeletons as quinoline and isoquinoline which are present in many compounds possessing biological activity. It was reported that some pharmacophores with potential antipsychotic activity contain the thieno- and furo-[3,2-c]pyridine ring systems.\textsuperscript{3} By studying\textsuperscript{4} of biological activity of tetrahydrobenzofuropyridines and benzothienopyridines was determined that these two groups are a part of compounds which show a high affinity in face of subtypes of receptors $\alpha_1$ and $\alpha_2$. This fact incites chemists about more complete explication of the structure and functions of these systems. Biological activity of the copper(II) and cobalt(II) 3-methylsufanylnicotinate complexes with furopyridines against various strains of bacteria and filamentous fungi has been investigated.\textsuperscript{5,6}

For a long time we have been interested in studying of the synthesis and reactivity of various furo[3,2-c]pyridines.\textsuperscript{7-13} This type of the fused heterocycles can be readily coordinated to metal centers through $N$-donor atom. A few from these compounds were used as ligands in the preparation of coordination compounds with transition metals Cu(II) Co(II) and Ni(II). The spectral, magnetic, thermal properties, coordination chemistry and X-ray analysis of these compounds have already been outlined.\textsuperscript{14-19}

Later on our attention was directed onto [1]benzofuro[3,2-c]pyridine system which is tricyclic heterosystem consisted from furopyridine ring fused with benzene ring.

Recently starting from [1]benzofuro[3,2-c]pyridine were successfully prepared the complex compounds and solved structures of tetra-$\mu$-acetato-bis(1-benzofuro[3,2-c]pyridine-copper(II) and bis(1-benzofuro[3,2-c]pyridine-κN)dichlorocobalt(II).\textsuperscript{20,21} We have published the synthesis and some reactions [1]benzofuro[3,2-c]pyridine and the study of the thermal stability of the mentioned complexes.\textsuperscript{22} According our best knowledge until now there were not studied other reactions of [1]benzofuro[3,2-c]pyridine 11 or its intermediates 1, 5, therefore we focused our attention on eliminating this shortcoming and herein we present our achieved results.

Results and Discussion

The synthesis of [1]benzofuro[3,2-c]pyridin-1(2H)-one 1 was already described.\textsuperscript{22} 2-Methyl[1]benzofuro[3,2-c]pyridin-1-one 2 was obtained by reaction of 1 with NaH and then methylated with methyl iodide. The reaction of 1 with the excess of $\text{P}_4\text{S}_10$ rendered the corresponding thione 3, which was methylated in PTC conditions giving 1-methylsulfanyl[1]benzofuro[3,2-c]pyridine 4 (Scheme 1). Replacement of oxygen of C=O group with a sulfur atom in the compound 1\textsuperscript{22} is associated with a downfield shift of the pyridine proton signals. The vibrational wavenumbers of NH and C=N bonds in 3 lay within the range of 3 210- 3 250 cm\textsuperscript{-1} and 1 538-1591 cm\textsuperscript{-1}, respectively. The chemical shifts of pyridine ring protons (H-3 H-4) were also shifted downfield by aromatization 3 into 4.

1-Chloro[1]benzofuro[3,2-c]pyridine 5 was synthesized by a four step method starting from 1-benzofuran-2-carbaldehyde as described in ref. 22. Refluxing of 5 with heterocyclic secondary amines (piperidine, morpholine and pyrrolidine) gave 6-8 in moderate yields. The compound 6 was purified on a silica gel column. Suzuki coupling reaction was realized with 5 and phenylboronic acid or pyridin-3-ylboronic acid in the presence of Pd(PPh3)4 catalyst in dichloromethane 1-phenyl[1]benzofuro[3,2-c]pyridine 9 and 1-(pyridin-3-yl)[1]benzofuro[3,2-c]pyridine 10 were formed (Scheme 2). The structure of 9 was determined by X-ray analysis (Fig. 1 and Fig. 2), as well by 1H and 13C NMR spectra. 13C NMR spectrum shows that the replacement of chlorine in the compound 5 C-1 (147.1 ppm22) with phenyl ring is associated with a downfield shift of C-1 carbon signal of the compound 9 (154.6 ppm).

The compounds 9 and 10 were used as N-ligands in the preparation of coordination compounds with transition metals Co(II) and Ni(II). Unfortunately all experiments which were done with 9 so far were unsuccessful; we supposed that it could be explained by a steric hindrance of the substituent attached at the C1 position. The structure of 1-phenyl[1]benzofuro[3,2-c]pyridine 9 was proved by X-ray analysis, then explained the reason of our coordination experiment failures.

The crystal data collection and the refinement results 1-phenyl[1]benzofuro[3,2-c]pyridine 9 are given in Table 1.

1-Phenyl[1]benzofuro[3,2-c]pyridine 9 crystallizes in P212121 space group with unit cell containing 8 molecules of 9. The crystal structure is composed of a two types of conformational isomers of 1-phenyl[1]benzofuro[3,2-c]pyridine. It has been found that the planes of the phenyl rings are turned in a way so that their dihedral angles with the C<sub>bzfupy</sub>-C<sub>ph</sub> vector are: ▲N-C9-C14-C = −136° and ▲N-C28-C33-C = +133°, respectively. This fact suggests the possibility of a partial rotation of the phenyl ring around the C<sub>bzfupy</sub>-C<sub>ph</sub> bond in solution. Therefore, the concomitant stereo shielding of the nitrogen atom may explain the weak coordination activity of the 1-phenyl[1]benzofuro[3,2-c]pyridine molecule.

On the other hand the compound 10 can be readily coordinated to metal centers through N-donor atom of the unfused pyridine ring. The preparation of coordination compounds of 10 with transition metals Co(II) and Ni(II) is in progress.

In the past one of us has been a co-author of the paper dealing the synthesis pyrazole fused furopyridines. At that time [1]benzofuro[3,2-c]pyridine 11 was omitted to be studied in these reactions leading to fused pyrazole ring onto 11. For that reason we prepared 2-amino[1]benzofuro[3,2-c]pyridin-2-ium-4-methylbenzene sulfonate 12 by direct N-amination of 11 with 1-[(aminooxy)sulfonyl]-4-methylbenzene in dichloromethane. Compound 12 is a white crystalline solid soluble in water. We supposed that on treatment with potassium carbonate in N,N-dimethylformamide, 12 is transformed in situ to a non-isolable zwitterionic N-imid 13, analogously, as it was described in pyridine series by Huisgen and coworkers. Further reactions with dienophiles confirmed our assumption. We found that 13 affords the corresponding 1-benzofuro[3,2-c]pyrazolo[1,5-a]pyridine carboxylic acid-esters 14 and 15 by 1,3-dipolar cycloaddition reactions with dimethyl but-2-yne-dioate (DMBD) or ethyl propiolate. As shown by \(^1\)H NMR spectra of crude products, the reaction gives, under given conditions, only compounds 14 or 15 without any side products of the bituminous unidentified material. The yields of 14 and 15 were unfortunately low, but they are comparable with were observed in the furo[3,2-c]pyridine series. The \(^1\)H NMR spectrum of 12 shows a doublet of H-4 with the coupling constant \(^3\)J(4,3) = 7.2 Hz. Protons of NH\(_2\) are shown as a broad signal at \(\delta = 8.3\) ppm. Signals of the protons H-1 and H-3 are shifted to higher values compared to the starting compound 11 ref. 22 due to presence of a positively charged nitrogen atom of pyridine part of [1]benzofuro[3,2-c]pyridine system. The structure elucidation of 1,3-dipolar cycloadducts 14 and 15 was accomplished by NMR spectra. The transformation was verified by disappearance of the most downfield signal H-1 of the starting compound 12 and the appearance of alkyl proton signals of 16 ester groups. Formation of a pyrazole ring containing 15 was supported by appearance of H-2 proton signal. 2D-spectra (gCOSY, gHSQCAD and gHMBCAD) were used for assignment of carbon signals in the synthesized compounds.

The reaction of 11 with benzoyl nitromethane and DMBD gave benzoyl dimethyl ester 16. The preparation of 16 was stimulated by an interesting publication in which the authors described a simple synthesis of functionalized pyrrolo[2,1-a]isoquinolines and other important derivatives. The reaction forming fused pyrroles is related to the cycloadditions of quinolinium and isoquinolinium ylides with electron-deficient acetylenes. It was interesting for us to compare the behavior our system 11 with isoquinoline in analogous reaction conditions. Firstly we repeated the reaction with isoquinoline according procedure which was published in ref. 25. We obtained the same results as the authors published. However, we have been not able to get the better yield starting from 11 without any side products of the bituminous unidentified material. According us, it can be explained, that our compound 11, possessing in its structure installed of the electron rich furan ring between benzene and pyridine rings, is less reactive than isoquinoline one.

Conclusions

In summary we developed the synthesis of 1-substituted [1]benzofuro[3,2-c]pyridines from 1-chloro[1]benzofuro[3,2-c]pyridine by nucleophilic substitutions or Suzuki coupling reaction. In addition it was performed the efficient preparation of new derivatives of [1]benzofuro[3,2-c]pyridines by 1,3-dipolar cycloaddition and addition reaction using dienophiles as are dimethyl but-2-ynedionate, ethyl propionate.

Experimental Section

General. Melting points were determined using Kofler hot plate. All solvents were distilled and dried before use. All reagents were commercially available were used without purification. Elemental analyses were determined using an EAGER 300. IR spectra were taken on a FTIR Nicolet NEXUS 470 spectrophotometer using KBr pellets (0.5 mg in 300 mg KBr) in region 4000 – 400 cm⁻¹. For interpretation of IR spectra following abbreviations are used s = strong band (a value of transmittance: 0-35%), m = medium band (a value of transmittance: 36-50%) w = weak (a value of transmittance: over 50%). ¹H NMR spectra were measured in DMSO-d₆ using spectrometer Varian INOVA 600 (for ¹H 599.782 MHz and for ¹³C 150.830 MHz) at 25 °C. Chemical shifts (δ-scale) are quoted in parts per million and following abbreviations are used: s = singlet; d = doublet; t = triplet; q = quartet; coupling constants (J) are given in Hz.
X-Ray analysis was realized on apparatus Oxford X-calibur on CCD camera. The crystal structure of 9 was solved with SHELXS-97 using direct methods, while further refinement with full-matrix least squares on \( F^2 \) were carried out with SHELXL-97. All hydrogen atoms in the structure were found from difference Fourier map of electron density and refined independently of atoms to which they were bound. Geometrical analysis was performed using SHELXL-97.

2-Methyl[1]benzofuro[3,2-c]pyridin-1-one (2). Pyridone 1 (1.85 g, 10 mmol) was suspended in dry dimethylformamide (10 mL) and NaH (60% in mineral oil; 0.54 g, 13 mgat) was added under stirring. When the evolution of hydrogen was complete, methyl iodide (2 g, 14 mmol) was added dropwise and the mixture stirred for 30 min. Then crushed ice was added and the mixture was extracted with chloroform. The organic layer was dried and evaporated in vacuum. The residue was triturated with diethyl ether and solid was collected by filtration. The crude product was crystallized from toluene. Yield 1.61 g, 80.9%, m.p. 123-125 °C; \( R_F = 0.75 \) (ethyl acetate).

Anal. Calcd. for \( \text{C}_{12}\text{H}_{9}\text{NOS} \): C, 72.35; H, 4.55; N, 7.03. Found: C, 72.32; H, 4.58; N, 7.03%. 

\(^1\)H NMR (DMSO-\( d_6 \)), \( \delta \): 8.02 (d, 1H, \( ^3J_{(9,8)} = 7.4 \) Hz, H-9), 7.87 (d, 1H, \( ^3J_{(6,7)} = 7.8 \) Hz, H-6), 7.66 (d, 1H, \( ^3J_{(3,4)} = 7.3 \) Hz, H-3); 7.42 (t, 1H, H-8), 7.40 (t, 1H, H-7), 6.78 (d, 1H, H-4), 3.57 (CH\(_3\)). \(^1^3\)C NMR (DMSO-\( d_6 \)), \( \delta \): 161.5 (C-1), 158.6 (C-4a), 154.3 (C-5a), 139.5 (C-3), 125.7 (C-7), 124.1 (C-8), 123.6 (C-9a), 120.7 (C-9), 111.3 (C-6), 109.3 (C-9b), 94.2 (C-4), 36.1 (CH\(_3\)).

[1]Benzofuro[3,2-c]pyridine-1(2H)-thione (3). A mixture of pyridone 1 (1.85 g, 10 mmol) and phosphorus pentasulfide (2.22 g 10 mmol) in dry pyridine (20 mL) was refluxed for 5 h. The hot reaction mixture was poured into hot water (150 mL). The mixture was allowed to settle overnight. The precipitate was collected by filtration, washed with water and crystallized from aqueous ethanol (80%) giving pale yellow crystals of 3. Yield 1.45 g, 72%, m.p. 255-258 °C; \( R_F = 0.55 \) (ethyl acetate). Anal. Calcd. for \( \text{C}_{11}\text{H}_{7}\text{NOS} \): C, 65.65; H, 3.51; N, 6.96; S, 15.93. 1-(Pyrrolidin-1-yl)[1]benzofuro[3,2-c]pyridine (8). The compound 8 was prepared according to the above procedure. Yield 52%, m.p. 80-83 °C (hexane); Rf = 0.54 (ethyl acetate) Anal. Calcd. for C_{15}H_{14}N_{2}O: C, 75.61; H, 5.92; N, 11.76. Found: C, 75.71; H, 5.90; N, 11.82%. 1^H NMR (DMSO-d_6), δ: 8.12 (d, 1H, 3J_{3,4} = 5.6 Hz, H-3), 8.01 (d, 1H, 3J_{9,8} = 7.6 Hz, H-9), 7.66 (d, 1H, 3J_{6,7} = 8.2 Hz, H-6), 7.44 (t, 1H, H-7), 7.37 (t, 1H, H-8), 7.03 (d, 1H, H-4), 3.72 (d, 4H, H-2´, H-5´), 1.91 (d, 4H, H-3´, H-4´). 13C NMR (DMSO-d_6), δ: 162.6 (C-1), 154.8 (C-4a), 154.2 (C-5a), 145.3 (C-3), 125.8 (C-8), 123.5 (C-7), 122.7 (C-9), 121.9 (C-9a), 111.2 (C-6), 105.4 (C-9b), 99.3 (C-4), 49.6 (C-2´, C-5´), 25.1 (C-3´, C-4´). IR spectrum, ν/cm⁻¹: 2966s, 2866s, 1934w, 1768w, 1618m, 1589s, 1560s, 1444s, 1419s, 1370m, 1342m, 1323m, 1296s, 1289s, 1268m, 1249w, 1225s, 1192m, 1111s, 1093s, 1032m, 1021w, 990w, 905w, 790s, 746s, 736s, 658m, 531w.

1-Phenyl[1]benzofuro[3,2-c]pyridine (9). The mixture of 1-chloro[1]benzofuro[3,2-c]pyridine (5) (1.018 g; 5 mmol), phenyl boronic acid (0.945 g; 8 mmol), water solution of sodium carbonate (2 M, 7.5 mL) and Pd(PPh₃)₄ (0.345 g, 0.3 mmol) in 1,2-dimethoxyethane (7.5 mL)
was heated at 80 °C for 6 h. Then the reaction mixture was poured into mixture dichloromethane and ice water (1:1). The separate organic layer was washed with water and brine, dried with magnesium sulfate, the solvent was evaporated in vacuum and residue was crystallized in methanol. Yield of 9 59%, m.p. 125 °C; Rf = 0.42 (ethyl acetate). Anal. Calcd. for C17H11NO: C, 83.25; H, 4.52; N, 5.71. Found: C, 83.04; H, 4.50; N, 5.46%. 1H NMR (DMSO-d6), δ: 8.70 (d, 1H, \( J_{3,4} = 5.4 \) Hz, H-3), 7.81 (d, 2H, \( J = 7.8 \) Hz, H-3’, H-5’), 7.77 (d, 1H, \( J_{6,7} = 7.8 \) Hz, H-6), 7.75 (d, 1H, H-4), 7.65 (d, 1H, \( J_{9,8} = 7.8 \) Hz, H-9), 7.60 (2H, \( J = 6.6 \) Hz, H-2’, H-6’), 7.55 (t, 1H, H-7), 7.54 (t, 1H, H-4’), 7.32 (t, 1H, H-8). 13C NMR (DMSO-d6), δ: 161.2 (C-4a), 155.2 (C-5a), 154.6 (C-1), 147.3 (C-3), 138.9 (C-1’), 129.3 (C-4’), 128.6 (C-2’, C-6’), 128.6 (C-7, C-8), 128.5 (C-3’, C-5’), 123.7 (C-8), 121.9 (C-9), 120.9 (C-9a), 117.8 (C-9b), 112.0 (C-6), 106.3 (C-4). IR spectrum, \( \nu \text{cm}^{-1} \): 3053s, 3030m, 2971m, 2923m, 1649m, 1629m, 1586s, 1497s, 1414s, 1337s, 1318m, 1291s, 1252m, 1225s, 1191s, 1120s, 1082m, 1070s, 1024m, 998s, 979m, 959w, 925s, 852s, 849s, 798s, 765s, 661m, 652s, 544m, 443m, 430w.

1-(Pyridin-3-yl)[1]benzofuro[3,2-c]pyridine (10). The mixture of 1-chloro[1]benzofuro[3,2-c]pyridine (5) (0.78 g; 3.8 mmol), pyridine-3-boronic acid (0.86 g; 7 mmol), water solution of sodium carbonate (2 M, 4.5 mL) and Pd(PPh3)4 (258 mg, 0.23 mmol) in dimethoxyethane (6.7 mL) was heated at 80 °C for 5 h. Then the reaction mixture was poured into mixture dichloromethane and ice water (1:1). The separate organic layer was washed with aqueous solution sodium carbonate (5%) and brine, dried with magnesium sulfate. The solvents were evaporated in vacuum and residue was crystallized in methanol. The product 10 is white crystalline solid. Yield: 0.51 g (54.5%) m.p. 89-90 °C. Anal. Calcd. for C16H14N2O: C, 78.03; H, 4.09; N, 11.38. Found: C, 78.31; H, 4.33; N, 11.26%. 1H NMR (DMSO-d6), δ: 9.02 (s, 1H, H-2’), 8.80 (d, d, 1H, \( J_{6,5} = 4.8 \) Hz, \( J_{6,6} = 1.2 \) Hz, H-6’), 8.76 (d, 1H, \( J_{3,4} = 5.4 \) Hz, H-3), 8.26 (d, d, 1H, \( J_{4,5} = 6.0 \) Hz, \( J_{4,6} = 1.2 \) Hz, H-4’), 7.84 (d, 1H, H-4), 7.82 (d, 1H, \( J_{6,7} = 7.8 \) Hz, H-6), 7.66 (d, d, 1H, \( J_{5,6} = 4.8 \) Hz, \( J_{5,5} = 1.2 \) Hz, H-5’), 7.61 (d, 1H, \( J_{9,8} = 7.8 \) Hz, H-9), 7.54 (t, 1H, H-7), 7.37 (t, 1H, H-8). 13C NMR (DMSO-d6), δ: 161.2 (C-4a), 155.3 (C-5a), 151.6 (C-1), 150.2 (C-6), 149.2 (C-2’), 147.6 (C-3), 136.2 (C-4’), 134.6 (C-1’), 128.9 (C-7), 124.0 (C-8), 123.7 (C-5’), 121.6 (C-9), 120.6 (C-9a), 118.3 (C-9b), 112.2 (C-6), 106.9 (C-4). IR spectrum, \( \nu \text{cm}^{-1} \): 3121m, 1686m, 1657m, 1588s, 1577s, 1561s, 1477s, 1463m, 1422s, 1330m, 1311w, 1294s, 1225m, 1184s, 1028m, 961w, 935s, 847s, 788m, 748s, 705m, 661s, 574w, 543s, 501w, 457m, 419w.

2-Amino[1]benzofuro[3,2-c]pyridin-2-ium 4-methylbenzene sulfonate (12). A solution of 1-[(aminoxy)sulfonyl]-4-methylbenzene (1 g, 5.3 mmol) in dichloromethane (2 mL) was added to a stirred solution of 11 (0.597 g, 3.5 mmol) in dichloromethane (1.5 mL) at room temperature. Stirring was continued for 5 h. The product was then precipitated by the addition of diethyl ether (20 mL), filtered off and crystallized from methanol to yield 1.12 g, 89.9%, m.p. 135 °C. Anal. Calcd. for C18H14N2O4S: C, 60.66; H, 4.53; N, 7.86; S, 9.00. Found: C, 60.32; H, 4.56; N, 7.52; S, 8.85%. 1H NMR (DMSO-d6), δ: 9.86 (s, 1H, H-1), 8.92 (d, 1H, \( J_{3,4} = 7.2 \) Hz, H-3), 8.40 (d, 1H, \( J_{4,3} = 7.2 \) Hz, H-4), 8.38 (d, 1H, \( J_{8,9} = 7.8 \) Hz, H-9), 8.30 (bs, 2H, NH2), 7.96 (d, 1H, \( J_{6,7} = 9.0 \) Hz, H-6), 7.80 (t, 1H, H-7), 7.64 (t, 1H, H-8), 7.48 (d, 2H, \( J_{2,3} = 8.4 \) Hz, H-2’, H-
6’), 7.07 (d, 1H, 3J(5,6) = 7.8 Hz, H-3’, H-5’), 2.24 (s, 3H, H-CH3). 13C NMR (DMSO-d6, δ: 160.2 (C-3a), 157.2 (C-4a), 145.4 (C-2’), 140.1 (C-2), 137.7 (C-4’), 136.9 (C-9), 131.4 (C-6), 128.0 (C-3’), 125.5 (C-7), 125.4 (C-2’), 123.7 (C-8b), 123.2 (C-8), 119.4 (C-8a), 112.7 (C-5), 111.0 (C-3), 20.7 (CH3). IR (KBr) v_{max}/cm^{-1}: 3141(m), 3117(m), 3085(m), 3058(m), 2925(w), 1718(w), 1612(w), 1599(w), 1527(w), 1484(w), 1461(s), 1453(m), 1418(w), 1382(w), 1272(w), 1209(s), 1187(s), 1153(m), 1123(s), 1108(w), 1034(s), 1010(s), 905(w), 843(m), 816(m), 774(m), 736(w), 684(s), 625(w), 586(w), 568(s).

**Dimethyl 1-benzofuro[3,2-c]pyrazolo[1,5-a]pyridine-1,2-dicarboxylate (14).** To a stirred solution of 12 (1.068 g, 3 mmol) in N,N-dimethylformamide (20 mL) was added potassium carbonate (0.49 g, 3.5 mmol) and dimethyl but-2-ynedioate (0.67 g, 4.7 mmol). The reaction mixture was stirred for 24 h at room temperature. The solvent was evaporated under reduced pressure, the residue was dissolved in diethyl ether and the insoluble material was filtered off. The filtrate was concentrated under diminished pressure and the product was crystallized from diethyl ether to yield 0.325 g, 33.5%, m.p. 147 °C. Anal. Calcd. for C_{17}H_{12}N_{2}O_{3}: C, 57.42; H, 3.13; N, 6.70.
