Abstract
A new class of compounds, 7-hydroxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione 2a-e, 7-hydroxy-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione 2f-j and 7-hydroxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione 2k-o have been synthesized by reacting various 1-(2-oxo-2-(2-oxo-2H-chromen-3-yl)ethyl)pyridinium bromides 1a-e with 1,3-cyclopentandione, 1,3-cyclohexandione and dimedone respectively in the presence of sodium acetate in refluxing glacial acetic acid. Thus, new fused chromenones derivatives are synthesized and characterized by analytical and spectral data.

Keywords: 1-(2-Oxo-2-(2-oxo-2H-chromen-3-yl)ethyl)pyridinium bromide, indeno[5,4-c]chromene, naphtho[2,1-c]chromene

Introduction

During the last twenty years, the study of the biological activities of chromene derivatives has drawn the attention of many scientists.1-10 Recently, the anticoagulant, antibacterial, antihelminthic, hypothermal and vasodilatory properties of chromene have been reviewed.1 Fused chromenones are interesting due to their significant antibacterial11-15 and novobiocin16,17 activities. Recently, Selectfluor18 has been used as an alternative to conventional catalysts for the synthesis of substituted chromenones via Pechmann condensation of phenols with β-ketoesters under solvent-free conditions. Some of the co-workers developed simple and efficient synthesis of polyfunction heterocyclics from readily available starting materials.19,20 They have reported the synthesis of chromenopyridine and thiopyranochromene derivatives by cycloaddition of active methylene compounds with chromene-3-(4-aminosulfonyl) carbanilide19 or coumarin-3-thiocarboxamide.20 Thus, considering the above synthetic methodology to prepare chromenones and its biological importance it was thought worthwhile to incorporate chromenone nucleus as a fuse group with indanone and naphthelenone. Therefore, in the present work we report a one pot
synthesis of 7-hydroxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione 2a-e, 7-hydroxy-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione 2f-j and 7-hydroxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione 2k-o utilizing inexpensive and easily available starting materials.

**Result and Discussion**

In this work, 1-(2-oxo-2-(2-oxo-2H-chromen-3-yl)ethyl)pyridinium bromide 1a-e were reacted with appropriate diketone compound such as 1,3-cyclopentandione, 1,3-cyclohexadione and dimedone respectively in the presence of sodium acetate in refluxing acetic acid to afford 7-hydroxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione 2a-e, 7-hydroxy-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione 2f-j and 7-hydroxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione 2k-o respectively (Scheme 1).

![Scheme 1](image-url)
Compound 1 was allowed to react with the 1,3-diketone under acidic conditions, to obtain fused chromenones 2. The reaction pathway is assumed to proceed by Michael addition of the active methylene function of 1-(2-oxo-2-(2-oxo-2H-chromen-3-yl) ethyl) pyridinium bromide on 1,3-diketone, resulting in the formation of intermediate having 1,5-dione functionality. The active methylene group (flanked by carbonyl ketone and pyridine moiety) then gets cyclized with carbonyl group of 1,3-diketone and the resultant intermediate finally aromatized to afford the product 2. The proposed mechanism is shown in Scheme 2.

Scheme 2

The structures of all the synthesized compounds were established on the basis of IR, $^1$H-NMR, $^{13}$C-NMR, DEPT-135 spectral data, elemental analysis and molecular weights of some selected compounds 2a, 2f and 2k were confirmed by mass spectrometry.

The IR spectrum of 2a–o showed characteristic bands around 1670, 1715, 2926, 1610, and 3020 cm$^{-1}$ for carbonyl stretching vibrations of δ-lactone ring, carbonyl stretching vibrations of 1,3-diketone ring, aliphatic C–H stretching vibrations of CH$_2$ groups, aromatic C=C and C–H stretching vibrations respectively. The decrease in C=O stretching frequency of δ-lactone ring
from the normal value (~1710 cm\(^{-1}\)) is due to hydrogen bonding with C\(_7\)-OH. A broad band observed around 3440 cm\(^{-1}\) is due to phenolic-OH stretching.

The NMR spectrum of compounds 2a–e showed two triplets around \(\delta\) 3.08 and \(\delta\) 3.13 each integrating for two protons attached at C\(_9\) and C\(_{10}\) respectively. A singlet appeared around \(\delta\) 8.10 is due to C\(_8\)-H and –OH proton was seen as a broad singlet around \(\delta\) 11.35, which was confirmed by D\(_2\)O exchanged spectrum. The remaining aromatic protons appeared at appropriate positions and with appropriate multiplicity. The \(^{13}\)C-NMR spectra of compounds 2a–e showed signals around \(\delta\) 28.0 and 29.0 due to C\(_9\) and C\(_{10}\), respectively. This was further confirmed by DEPT-135 spectra in which these signals got inverted. This supports the incorporation of indanone ring in the compounds 2a–e. The carbonyl carbon signals in indanone ring and \(\bar{\delta}\)-lactone ring appeared around \(\delta\) 200.0 and \(\delta\) 163.0 respectively. The aromatic carbons appeared between \(\delta\) 105.0 and 161.6. The signal around \(\delta\) 161.6 is due to C\(_7\)-OH. Mass spectra of compound 2a gave molecular ion peak at 266.0 (M\(^{+}\)) corresponding to molecular formula C\(_{16}\)H\(_{10}\)O\(_4\).

The NMR spectrum of compounds 2f–j showed a multiplet around \(\delta\) 2.25 integrating for two protons attached at C\(_{10}\). Two triplets appeared around \(\delta\) 2.70 and \(\delta\) 2.95 each integrating for two protons attached at C\(_9\) and C\(_{11}\) respectively. A singlet appeared around \(\delta\) 8.15 is due to C\(_8\)-H and –OH proton was seen as a broad singlet around \(\delta\) 11.40, which was confirmed by D\(_2\)O exchanged spectrum. The remaining aromatic protons appeared as expected. The \(^{13}\)C-NMR spectra of compounds 2f–j showed signals around \(\delta\) 23.0, 30.0 and 35.0 due to C\(_9\), C\(_{10}\) and C\(_{11}\) respectively. This was further confirmed by DEPT-135 spectra in which these signals got inverted. This supports the incorporation of naphthalenone ring in the compounds 2f–j. The carbonyl carbon signals in naphthalenone ring and \(\bar{\delta}\)-lactone ring appeared around \(\delta\) 197.0 and \(\delta\) 163.0 respectively. The aromatic carbons appeared between \(\delta\) 107.0 and 161.9. The signal around \(\delta\) 161.9 is due to C\(_7\)-OH. Mass spectra of compound 2f gave molecular ion peak at 280.0 (M\(^{+}\)) corresponding to molecular formula C\(_{17}\)H\(_{12}\)O\(_4\).

The NMR spectrum of compounds 2k–o showed three singlets around \(\delta\) 1.11, 2.70 and 2.90 due to six protons of two methyl groups attached at C\(_{10}\), two protons attached at C\(_9\) and C\(_{11}\) respectively. A singlet appeared around \(\delta\) 8.20 is due to C\(_8\)-H and –OH proton was seen as a broad singlet around \(\delta\) 11.40, which was confirmed as stated earlier. The remaining aromatic protons appeared as expected. The \(^{13}\)C-NMR spectra of compounds 2k–o showed signals around \(\delta\) 28.5, 33.6, 44.7 and 54.5 due to two methyl group attached at C\(_{10}\), C\(_{10}\) (itself), C\(_9\) and C\(_{11}\) respectively. This was further confirmed by DEPT-135 spectra in which C\(_9\) and C\(_{11}\) signals got inverted. The incorporation of naphthalenone ring in the compounds 2k–o is this supported. The carbonyl carbon signals in naphthalenone ring and \(\bar{\delta}\)-lactone ring appeared around \(\delta\) 200.0 and \(\delta\) 163.0 respectively. The aromatic carbons appeared between \(\delta\) 108.0 and 162.0. The signal around \(\delta\) 162.0 is due to C\(_7\)-OH. Mass spectra of compound 2k gave molecular ion peak at 308.1 (M\(^{+}\)) corresponding to molecular formula C\(_{19}\)H\(_{16}\)O\(_4\).

All other compounds gave satisfactory spectral data which are given in experimental section.
Conclusions

In summary, a simple, convenient and general method has been developed for the preparation of fused chromenes utilizing easily accessible and inexpensive starting materials. This synthetic approach includes some important aspects such as high yields and mild reaction conditions, which make this synthetic protocol a useful and an attractive procedure for the synthesis of indanone and naphthalenone fused chromenones derivatives. This reaction can be regarded as a new approach for the preparation of synthetically and pharmaceutically relevant heterocyclic systems.

Experimental Section

**General.** Reagents and solvents were obtained from commercial sources and used without further purification. All melting points were taken in open capillaries and are uncorrected. Thin-layer chromatography (TLC, on aluminum plates coated with silica gel 60 F254, 0.25 mm thickness, Merck) was used for monitoring the progress of all reactions, purity and homogeneity of the synthesized compounds. Elemental analysis (% C, H, N) was carried out by Perkin-Elmer 2400 series-II elemental analyzer at Sophisticated Instrumentation Centre for Applied Research & Training (SICART), Vallabh Vidhyanagar and result obtained for those elements are within ±0.4% of the theoretical values. The FTIR spectra were recorded using potassium bromide disc on a Shimadzu FTIR 8401 spectrophotometer and only the characteristic peaks are reported. ¹H-NMR and ¹³C-NMR spectra were recorded using DMSO-d₆ solvent on a Bruker Avance 400 (MHz) spectrometer using solvent peak as internal standard at 400 and 100 MHz, respectively. Chemical shifts are reported in parts per million (ppm). Mass spectra were scanned on a Shimadzu LCMS 2010 spectrometer. 1-(2-oxo-2-(2-oxo-2H-chromen-3-yl) ethyl) pyridinium bromide 1(a-e) was prepared according the literature procedures²¹.

**General procedure for the synthesis of fused chromenones (2a-o).** In a round bottom flask (100 mL), a solution of appropriate diketone (1,3-cyclopentandione or 1,3-cyclohexandione or dimedone) (0.0058 mol) was taken in glacial acetic acid (15 mL). To this solution, sodium acetate (0.06 mol) and an appropriate 1-(2-oxo-2-(2-oxo-2H-chromen-3-yl) ethyl) pyridinium bromide 1a-e (0.006 mol) in acetic acid (10 mL) were added with stirring. The reaction mixture was stirred at room temperature for 45 minutes and then refluxed in an oil bath at 140-145°C for 6 hours and left overnight. It was then poured in water (75 mL) and the crude solid obtained was extracted with chloroform (3 x 50 mL). The organic layer was washed with 10% sodium bicarbonate solution (50 mL), water (50 mL) and dried over anhydrous sodium sulfate. Distillation of chloroform in vacuum gave gummy material which was subjected to column
chromatography using ethyl acetate-pet.ether (60-80) (2:8) as an eluent to afford product 2a-o respectively. The product was recrystallized from chloroform-hexane.

7-Hydroxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione (2a). Yield 62%; mp 222-224 °C; white crystalline solid; Selected IR frequencies (KBr): 3445 (broad, -OH), 2926 (C-H, aliphatic), 1670 (C=O, δ-lactone), 1710 (C=O, indanone), 1615 (C=C, aromatic) cm⁻¹; ¹H NMR (CDCl₃): δ 3.08 (2H, t, C₉-H, J 6.8 Hz), 3.15 (2H, t, C₁₀-H, J 6.8 Hz), 7.33-7.61 (4H, m, Ar-H), 8.07 (1H, s, C₈-H), 11.30 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.0 (CH₂), 29.0 (CH₂), 105.0 (C), 114.7 (CH), 117.8 (CH), 118.4 (C), 123.3 (CH), 127.2 (CH), 129.8 (C), 130.6 (CH), 136.5 (C), 139.2 (C), 150.2 (C), 161.6 (C₇), 163.0 (C=O, δ-lactone), 200.0 (C=O, indanone); Anal. Calcd. for C₁₀H₁₀O₄: C, 72.18; H, 3.79%. Found: C, 72.08; H, 3.51%. MS: 266.0 (M⁺).

3,7-Dihydroxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione (2b). Yield 57%; mp 176-178 °C; white crystalline solid; Selected IR frequencies (KBr): 3442 (broad, -OH), 2935 (C-H, aliphatic), 1680 (C=O, δ-lactone), 1720 (C=O, indanone), 1610 (C=C, aromatic) cm⁻¹; ¹H NMR (CDCl₃): δ 3.05 (2H, t, C₉-H, J 6.7 Hz), 3.13 (2H, t, C₁₀-H, J 6.7 Hz), 7.34-7.59 (3H, m, Ar-H), 8.09 (1H, s, C₈-H), 11.30 (1H, s, -OH proton, D₂O exchangeable), 11.83 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.5 (CH₂), 29.8 (CH₂), 105.7 (C), 113.2 (CH), 116.7 (CH), 118.7 (C), 123.4 (CH), 127.5 (CH), 129.8 (C), 135.7 (C), 140.3 (C), 150.2 (C), 159.7 (C), 160.7 (C₇), 163.3 (C=O, δ-lactone), 199.9 (C=O, indanone); Anal. Calcd. for C₁₀H₁₀O₅: C, 68.09; H, 3.57%. Found: C, 68.23; H, 3.42%.

7-Hydroxy-3-methoxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione (2c). Yield 63%; mp 228-230 °C; off-white solid; Selected IR frequencies (KBr): 3439 (broad, -OH), 2948 (C-H, aliphatic), 1670 (C=O, δ-lactone), 1730 (C=O, indanone), 1622 (C=C, aromatic), 1055 (asymmetric and symmetric C-O-C stretching) cm⁻¹; ¹H NMR (CDCl₃): δ 3.07 (2H, t, C₉-H, J 6.8 Hz), 3.11 (2H, t, C₁₀-H, J 6.8 Hz), 3.94 (3H, s, OCH₃), 7.32-7.55 (3H, m, Ar-H), 8.11 (1H, s, C₈-H), 11.42 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.4 (CH₂), 28.8 (CH₂), 56.2 (OCH₃), 106.7 (C), 114.1 (CH), 116.4 (CH), 119.5 (C), 122.2 (CH), 126.4 (CH), 129.2 (C), 136.8 (C), 140.1 (C), 150.4 (C), 158.8 (C), 161.7 (C₇), 163.5 (C=O, δ-lactone), 200.1 (C=O, indanone); Anal. Calcd. for C₁₇H₁₂O₅: C, 68.92; H, 4.08%. Found: C, 68.83; H, 3.97%.

4,7-Dihydroxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione (2d). Yield 64%; mp 195-198 °C; white crystalline solid; Selected IR frequencies (KBr): 3437 (broad, -OH), 2933 (C-H, aliphatic), 1680 (C=O, δ-lactone), 1715 (C=O, indanone), 1617 (C=C, aromatic) cm⁻¹; ¹H NMR (CDCl₃): δ 3.08 (2H, t, C₉-H, J 6.7 Hz), 3.10 (2H, t, C₁₀-H, J 6.7 Hz), 7.30-7.57 (3H, m, Ar-H), 8.08 (1H, s, C₈-H), 11.35 (1H, s, -OH proton, D₂O exchangeable), 11.78 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.8 (CH₂), 29.4 (CH₂), 105.2 (C), 113.2 (CH), 116.9 (CH), 118.7 (C), 122.1 (CH), 127.8 (CH), 130.2 (C), 135.2 (C), 140.5 (C), 151.8 (C), 159.1 (C), 160.1 (C₇), 163.8 (C=O, δ-lactone), 200.0 (C=O, indanone); Anal. Calcd. for C₁₆H₁₀O₅: C, 68.09; H, 3.57%. Found: C, 68.11; H, 3.71%.

7-Hydroxy-4-methoxy-9,10-dihydroindeno[5,4-c]chromene-6,11-dione (2e). Yield 67%; mp 173-176 °C; off-white solid; Selected IR frequencies (KBr): 3445 (broad, -OH), 2933 (C-H, aliphatic), 1670 (C=O, δ-lactone), 1720 (C=O, indanone), 1621 (C=C, aromatic), 1050

4,7-Dihydroxy-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2i). Yield 67%; mp 203-207 °C; white crystalline solid; Selected IR frequencies (KBr): 3440 (broad, -OH), 2925 (C-H, aliphatic), 1650 (C=O, \(\delta\)-lactone), 1715 (C=O, naphthalenone), 1610 (C=C, aromatic) cm\(^{-1}\); \(^1\)H NMR (CDCl\(_3\)): \(\delta\) 2.22 (2H, m, C\(_{10}\)-H), 2.77 (2H, t, C\(_9\)-H, J 5.5 Hz), 2.95 (2H, t, C\(_{11}\)-H, J 5.5 Hz), 7.33-7.61 (3H, m, Ar-H), 8.11 (1H, s, C\(_8\)-H), 11.42 (1H, s, -OH proton, D\(_2\)O exchangeable), 11.86 (1H, s, -OH proton, D\(_2\)O exchangeable); \(^1\)C NMR: \(\delta\) 22.9 (CH\(_2\)), 30.2
(CH₂), 35.1 (CH₂), 107.2 (C), 111.8 (C), 116.5 (CH), 120.8 (CH), 121.6 (CH), 125.3 (C), 128.4 (C), 135.1 (CH), 141.1 (C), 151.6 (C), 158.7 (C), 161.2 (C₇), 163.5 (C=O, δ-lactone), 197.2 (C=O, naphthalene); Anal. Calcd. for C₁₇H₁₂O₅ : C, 68.92; H, 4.08%; Found: C, 68.75; H, 3.98%.

7-Hydroxy-4-methoxy-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2j). Yield 61%; mp 183-186 °C; off-white solid; Selected IR frequencies (KBr): 3450 (broad, -OH), 2930 (C-H, aliphatic), 1670 (C=O, δ-lactone), 1720 (C=O, indanone), 1621 (C=C, aromatic), 1055 (asymmetric and symmetric C-O-C stretching) cm⁻¹; ¹H NMR (CDCl₃): δ 2.20 (2H, m, C₁₀-H), 2.70 (2H, t, C₉-H), 7.55-7.67 (3H, s, Ar-H), 8.15 (1H, s, C₈-H), 11.40 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 23.3 (CH₂), 30.4 (CH₂), 34.9 (CH₂), 56.3 (OCH₃), 107.9 (C), 111.8 (C), 116.5 (CH), 121.2 (CH), 122.4 (CH), 125.3 (C), 128.7 (C), 136.2 (CH), 140.9 (C), 151.4 (C), 157.8 (C), 161.5 (C₇), 163.1 (C=O, δ-lactone), 197.8 (C=O, naphthalene); Anal. Calcd. for C₁₇H₁₂O₅ : C, 69.67; H, 4.55 %. Found: C, 69.55; H, 4.72 %.

7-Hydroxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2k). Yield 66%; mp 180-182 °C; off-white solid; Selected IR frequencies (KBr): 3435 (broad, -OH), 3020 (C-H, aliphatic), 1660 (C=O, δ-lactone), 1715 (C=O, naphthalene), 1605 (C=C, aromatic) cm⁻¹; ¹H NMR (CDCl₃): δ 1.11 (6H, s, 2 x CH₃), 2.70 (2H, s, C₉-H), 2.95 (2H, s, C₁₁-H), 7.30-7.59 (4H, m, Ar-H), 8.20 (1H, s, C₈-H), 11.44 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.2 (2 x CH₃), 33.6 (C), 44.7 (CH₂), 54.5 (CH₂), 108.6 (C), 112.4 (C), 117.5 (CH), 121.5 (CH), 125.6 (CH), 127.2 (C), 128.4 (CH), 137.3 (CH), 142.3 (C), 150.5 (C), 158.8 (C), 162.3 (C₇), 163.3 (C=O, δ-lactone), 200.9 (C=O, naphthalene); Anal. Calcd. for C₁₉H₁₆O₄ : C, 74.01; H, 5.23%. Found: C, 74.21; H, 5.33%. MS: 308.1 (M⁺).

3,7-Dihydroxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2l). Yield 63%; mp 207-210 °C; white solid; Selected IR frequencies (KBr): 3440 (broad, -OH), 3030 (C-H, aliphatic), 1650 (C=O, δ-lactone), 1710 (C=O, naphthalene), 1615 (C=C, aromatic) cm⁻¹; ¹H NMR (CDCl₃): δ 1.11 (6H, s, 2 x CH₃), 2.73 (2H, s, C₉-H), 2.90 (2H, s, C₁₁-H), 7.34-7.67 (3H, m, Ar-H), 8.18 (1H, s, C₈-H), 11.39 (1H, s, -OH proton, D₂O exchangeable), 11.81 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.3 (2 x CH₃), 33.4 (C), 44.5 (CH₂), 54.2 (CH₂), 108.9 (C), 113.5 (C), 117.3 (CH), 121.7 (CH), 124.2 (C), 127.6 (CH), 128.9 (C), 137.6 (CH), 143.5 (C), 151.2 (C), 158.4 (C), 162.7 (C₇), 163.8 (C=O, δ-lactone), 200.7 (C=O, naphthalene); Anal. Calcd. for C₁₉H₁₈O₅ : C, 70.36; H, 4.97%. Found: C, 70.58; H, 5.20%.

7-Hydroxy-3-methoxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2m). Yield 59%; mp 182-186 °C; white solid; Selected IR frequencies (KBr): 3435 (broad, -OH), 2990 (C-H, aliphatic), 1670 (C=O, δ-lactone), 1730 (C=O, naphthalene), 1607 (C=C, aromatic), 1055 (asymmetric and symmetric C-O-C stretching) cm⁻¹; ¹H NMR (CDCl₃): δ 1.11 (6H, s, 2 x CH₃), 2.72 (2H, s, C₉-H), 2.96 (2H, s, C₁₁-H), 3.39 (3H, s, OCH₃), 7.35-7.69 (3H, m, Ar-H), 8.16 (1H, s, C₈-H), 11.40 (1H, s, -OH proton, D₂O exchangeable); ¹³C NMR: δ 28.4 (2 x CH₃), 33.4 (C), 44.3 (CH₂), 54.4 (CH₂), 56.4 (OCH₃), 109.4 (C), 113.3 (C), 116.7 (CH), 120.8 (CH), 124.3 (CH), 127.4 (C), 128.4 (C), 136.7 (CH), 143.2 (C), 151.3 (C),...
158.8 (C), 162.9 (C), 163.5 (C=O, δ-lactone), 200.3 (C=O, naphthalenone); Anal. Calcd. for C_{20}H_{18}O_{5}: C, 70.99; H, 5.36%. Found: C, 70.87; H, 5.55%.

4,7-Dihydroxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2n). Yield 66%; mp 201-204 °C; white solid; Selected IR frequencies (KBr): 3440 (broad, -OH), 3033 (C-H, aliphatic), 1650 (C=O, δ-lactone), 1710 (C=O, naphthalenone), 1617 (C=C, aromatic) cm\(^{-1}\); \(^1\)H NMR (CDCl\(_3\)): \(\delta \) 1.11 (6H, s, 2 x CH\(_3\)), 2.72 (2H, s, C\(_9\)-H), 2.92 (2H, s, C\(_{11}\)-H), 7.33-7.67 (3H, m, Ar-H), 8.15 (1H, s, C\(_8\)-H), 11.40 (1H, s, -OH proton, D\(_2\)O exchangeable), 11.82 (1H, s, -OH proton, D\(_2\)O exchangeable); \(^{13}\)C NMR: \(\delta \) 28.2 (2H), 33.7 (C), 44.7 (CH\(_2\)), 54.6 (CH\(_2\)), 109.2 (C), 113.2 (C), 117.8 (CH), 121.6 (CH), 123.8 (C), 127.9 (CH), 129.3 (C), 137.2 (CH), 143.2 (C), 151.7 (C), 158.8 (C), 162.3 (C\(_7\)), 163.6 (C=O, δ-lactone), 200.1 (C=O, naphthalenone); Anal. Calcd. for C_{19}H_{16}O_{5}: C, 70.36; H, 4.97%. Found: C, 70.20; H, 5.27%.

7-Hydroxy-4-methoxy-10,10-dimethyl-10,11-dihydro-6H-naphtho[2,1-c]chromene-6,12(9H)-dione (2o). Yield 55%; mp 193-197 °C; off-white solid; Selected IR frequencies (KBr): 3430 (broad, -OH), 3010 (C-H, aliphatic), 1665 (C=O, δ-lactone), 1730 (C=O, naphthalenone), 1615 (C=C, aromatic), 1045 (asymmetric and symmetric C-O-C stretching) cm\(^{-1}\); \(^1\)H NMR (CDCl\(_3\)): \(\delta \) 1.11 (6H, s, 2 x CH\(_3\)), 2.70 (2H, s, C\(_9\)-H), 2.93 (2H, s, C\(_{11}\)-H), 3.40 (3H, s, OCH\(_3\)), 7.33-7.58 (3H, m, Ar-H), 8.19 (1H, s, C\(_8\)-H), 11.44 (1H, s, -OH proton, D\(_2\)O exchangeable); \(^{13}\)C NMR: \(\delta \) 28.5 (2H), 33.4 (C), 44.7 (CH\(_2\)), 54.8 (CH\(_2\)), 56.9 (OCH\(_3\)), 108.0 (C), 113.5 (C), 116.6 (CH), 121.1 (CH), 124.5 (CH), 127.7 (C), 128.3 (C), 136.7 (CH), 143.4 (C), 151.5 (C), 158.8 (C), 162.8 (C\(_7\)), 163.4 (C=O, δ-lactone), 200.6 (C=O, naphthalenone); Anal. Calcd. for C_{20}H_{18}O_{5}: C, 70.99; H, 5.36%. Found: C, 70.66; H, 5.10%.

Acknowledgements

The author expresses his sincere thanks to the Department of Advanced Organic Chemistry, P. D. Patel Institute of Applied Sciences, Charotar University of Science & Technology (Charusat) for providing research facilities. Vaibhav Analytical Laboratory, Ahmedabad for IR spectral analysis as well as Oxygen Healthcare Research Pvt. Ltd., Ahmedabad for providing mass spectrometry facilities.
