1. Mechanistic Studies

To a solution of 2,2-diphenyl-1,3-dithiolane (1 mmol) in DCM (4 mL) was added ^{18}O -labeled PhIO (1.2 mmol, $^{16}\text{O}:^{18}\text{O} = 72:28$). The mixture was stirred at room temperature until TLC revealed a complete consumption of the substrate. The solvent was removed by reduced pressure to obtain the crude products which were further purified by flash column chromatography to afford the parent aldehydes. HRMS analysis of the PhIO and aldehyde product showed that both of them had ^{18}O -labeled ingredients. The spectra diagrams are shown below.
