Procedures and $^1$H, $^{31}$P NMR data for compounds 1a-c and 2a ..........................................................S2
General procedure for the preparation of compounds 1a-c. A solution of corresponding trichloroacetimidoylchloride (0.03 mol) and trialkylphosphate (0.06 mol) in toluene (50 ml) was stirred at 120°C for 2-3 h. Solvent was evaporated in vacuo, the residue was distilled.
