## 2. Synthesis of substrate

### Synthesis of **2g**

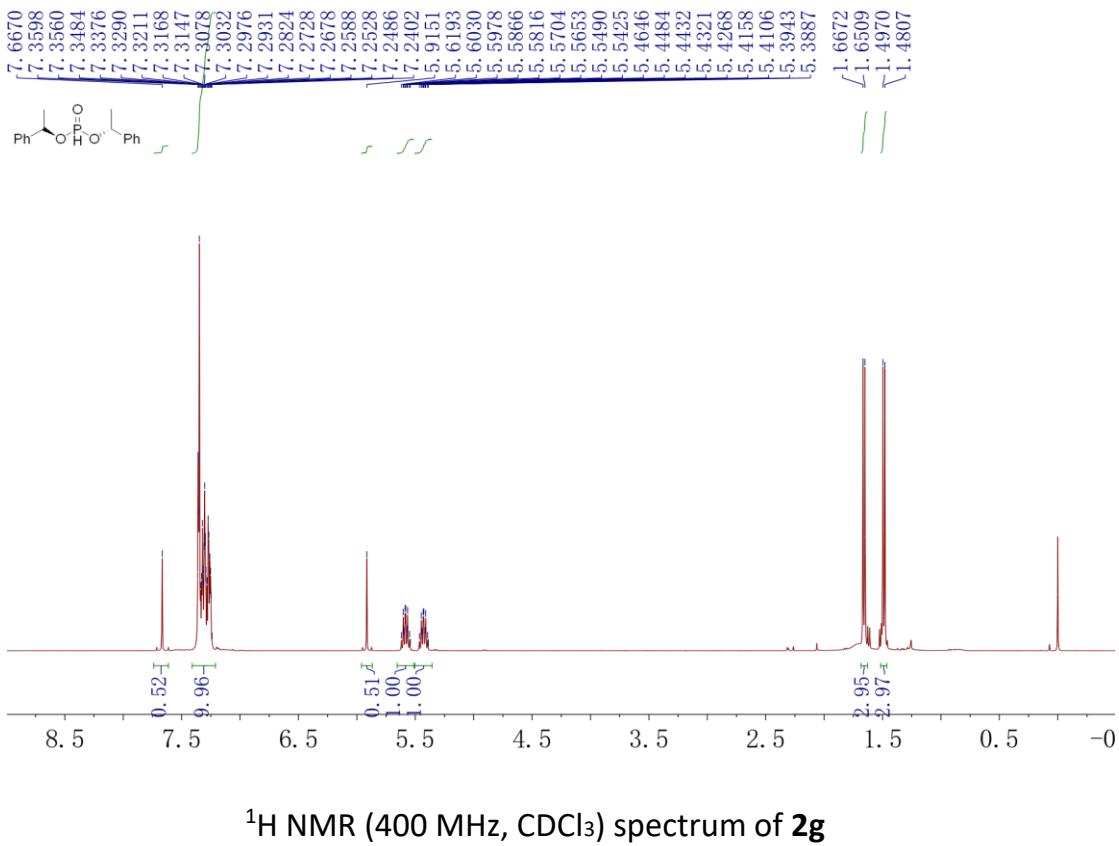

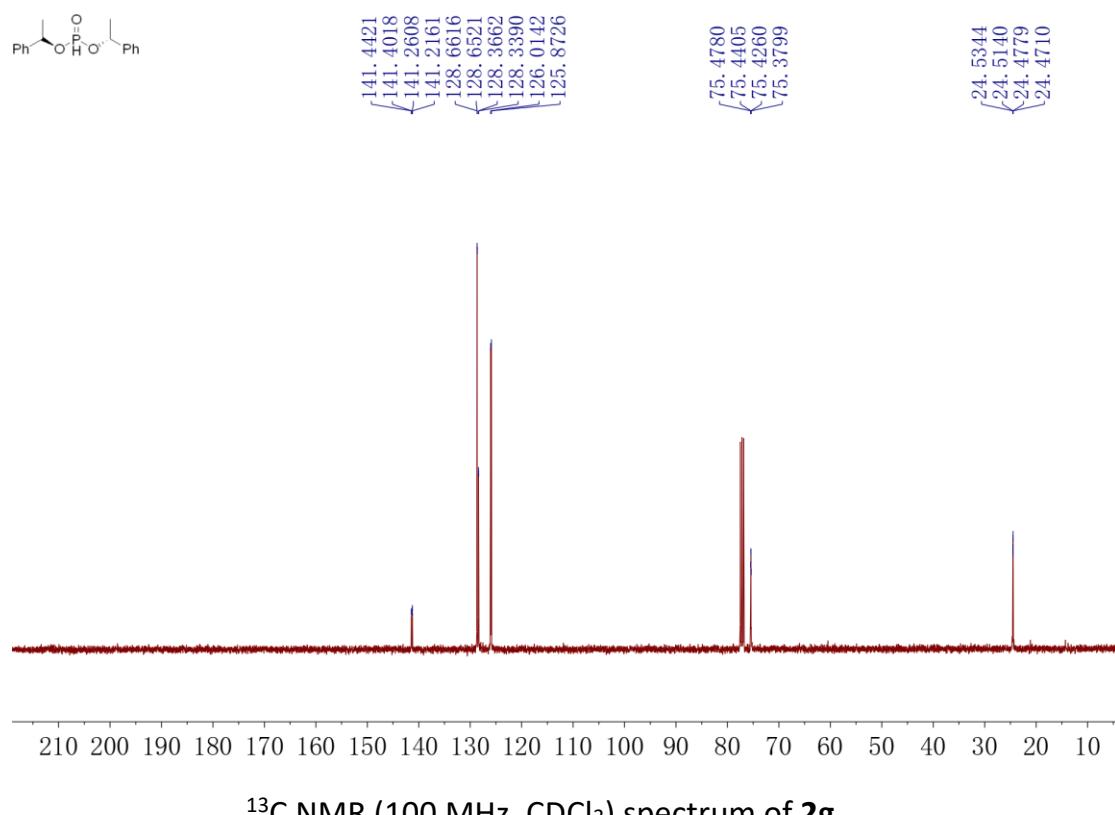

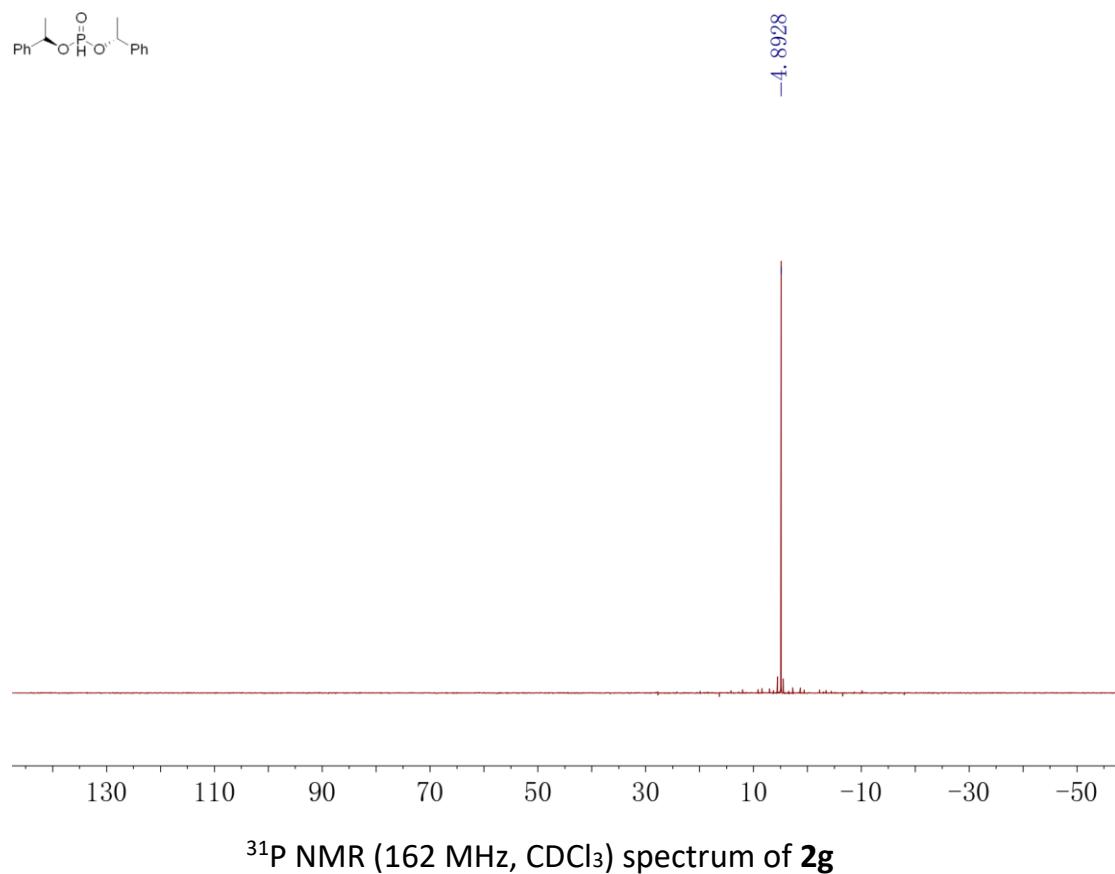

To a solution of (R)-(+)-1-phenylethanol (0.85 g, 7.0 mmol) and triethylamine (1.06 g, 10.5 mmol) in dry toluene (10 mL) was added a solution of phosphorus trichloride (0.48 g, 3.5 mmol) in dry toluene (3.5 mL) dropwise at  $-30^\circ\text{C}$ . The reaction mixture was slowly warmed to room temperature and stirred for 2 h at this temperature. Then,  $\text{H}_2\text{O}$  (1 mL) was added to the mixture. After stirring this mixture for 10 min, the organic layer was dried over  $\text{MgSO}_4$ , filtered and concentrated under reduced pressure. The residue was purified by column chromatography on silica gel (eluted with petroleum ether/ethyl acetate =5:1) to give compound **2g**.
